                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              either chronic or acute phases) and (11) autoimmune diseases, specifically rheumatoid arthritis, systemic lupus erythematosus and acquired immune deficiency syndrome, in humans or other mammals. The asparaginase can also be used for the covalent modification of biologically active proteins by acylation which is used to alter pharmacokinetic and immunogenic properties of biologically active proteins, and can be applied to any protein used to treat animal, human or plant diseases. The asparaginase can be used to treat patients who have become hypersensitive to other microbial asparaginases. The asparaginase has reduced toxicity and reduced tendency to cause immunosuppression or allergy, particularly it has no effect on spleen and thymus histology or lymphocyte marker distribution and no hepatotoxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is a novel L-asparaginase gene from Wolinella succinogenes which is used in a method for the treatment of diseases that respond to asparagine depletion. This asparaginase and its analogues, are particularly used to treat (1) malignant diseases, particularly where haematological and specifically lymphoma, leukaemia and myeloma (in either chronic or acute phases) and (ii) autoimmune diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1133 BP; 315 A; 305 C; 267 G; 246 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 5; Fig 6; 58pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating diseases responsive to asparagine depletion - especial cancer and auto-immune diseases, using a Wolinella succinogenes {\bf r}

                                                  This invention describes a novel L-asparaginase-producing recombinant bacteria and its fermentation culture method. The new cell is produced using standard recombinant techniques. The enzyme gene expressed in the cell is different from the reported enzyme gene in sequence, and its individual amino acid composition is also different. The culture medium adopted for culturing the new bacterial cells is cheap and easily available, and the fermentation process used to grow the cells and express the enzyme is simple and easy to implement. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       L-asparaginase;

The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.Influenzae nucleotide sequence (I), a representative fragment of (I) or a nucleotide sequence at least 99% identical to (I). By providing the full-length genomic sequence in a computer readable form, it is possible to identify commercially important nucleic acid fragments and expression modulating fragments (EMFs) of the Haemophilus genome. The EMFs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered organisms comprising the predicted ORFS can be used to produce any of the polypeptide fragments of the H. influenzae Rd genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       07-JUN-1995;

                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comuring anti-asparaginase II monoclonal antibody (MAD), and human casparaginase II. The gene was used in the preparation of a novel recombinant chimeric polypeptide, comprising a lst region comprising a biologically active domain and another domain controlling an epitope, linked via a polypeptide to a 2nd region containing an epitope, linked via a polypeptide to a 2nd region containing an epitope, linked via a polypeptide to a 2nd region chains of an antibody variable region which specifically binds the epitope in the 1st region. The chimeric polypeptide assumes a conformation in which the SCA is bound to the epitope of the 1st region and protects its biological activity from deactivation by condising agents or alcohol. The regions, protechlytic enzymes, coxidising agents or alcohol. The regions of the chimeric polypeptide interact to form a structure analogous to an antibody-antigen complex. A L-asparaginase-SCA fusion protein of the character of the complex of the character of the control than from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a polynucleotide of the invention. It was isolated from Helicobacter pylori and encodes a H. pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used detection and diagnosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAN70557 standard;
When E.carotovora SCRI 193 contg. plasmid pASN 32 was cultured, the cell-free culture broth contained 11.19 LA units/ml with specific activity 53.34 units/mg of protein. These figures compare with 10. LA units/ml and 14.97 units/mg of protein for the currently used prodn. strain E.chrysanthemi NCPPB 1066.

                                                                                                                                                                                                                                                                                                                                                                      Chromosomal DNA from Pseudomonas sp. 7A (ATCC 29598) was used to construct a genomic library in Escherichia coli LE392. Screening with mixed oligonuclectide probes was used to isolate a glutaminase-encoding clone. This was sequenced using the primers given in AAQ68439-47. The gene can be used to manufacture recombinant glutaminase, free of Pseudomonas exotoxin, for use in e.g. HIV and cancer therapy. The gene may also be used in gene therapy protocols. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant glutaminase derived from Pseudomonas 7A - expressed in {\mathbb E}. coli to increase yield and avoid Pseudomonas endotoxins for antiviral and anticancer therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a DNA fragment coding for an Erwinia carotovora L-asparaginase. The invention also includes a homogeneous preparation of a mature form of L-asparaginase produced by expression of the DNA in a bacterial strain and has low affinity for L-glutamine. The L-asparaginase protein encoded by the DNA is useful for treating malignant and non-malignant diseases of the blood (e.g. acute lymphoblastic leukemia).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated Erwinia carotovora L-asparaginase gene useful for producing a L-asparaginase protein useful for treating malignant and nonmalignant diseases of the blood \, -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22-AUG-2001; 2001RU-0123442.

The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This sequence encodes a selected interacting domain (SID), identified via protein-protein interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 345 BP; 90 A; 69 C; 104 G; 82 T; 0 other;

                                                                                                                                                                                                                                                                                                                                            ф
                                                                                                                                                                                                                                                                                                                                                                          Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC freeze proteins lower the freezing point of a solution without affecting CC the melting point of the solution. An activated anti-freeze protein may be incorporated into plant, produce or fish in an amount sufficient to CC provide antifreeze protection or in a region of a target tissue to CC provide antifreeze protein to limit tumour cell or target tissue to CC cryoinjury during cryosurgery. The proteins of the invention may also be created in hypothermic solutions or bathing media to reduce cold damage in CC cold the proteins may be used as de-icing formulations or used on CC surfaces to reduce existing ice buildup or abate the formation of ice machinery and plant surfaces or as a food product to improve the quality of food by abating freezing of solutions, freezer burn, or degradation CC due to cold storage. The polynucleotides for the activated protein can CC be used to create transgenic or gene-modified plants, crops, fish, or CC animals having greater tolerance to cold climatisation. The Tm 12.86 CC antibody/antiserum which is also used as a screening device to screen CC clubraries to identify homologous sequences in other species cDNA cold first protein minus the signal peptide of the invention. This cDNA cc freeze activity of the recombinant protein

cDNA encoding Tm 2.2 clone/His tag fusion protein minus signal sequence

0;

```
This invention relates to a cDNA polynucleotide comprising a nucleotide sequence encoding a thermal hysteresis protein (THP) which is a Type III anti-freeze protein derived from the Tenebrionoidea Superfamily. Antifreeze proteins lower the freezing point of a solution without affecting the melting point of the solution. An activated anti-freeze protein may be incorporated into plant, produce or fish in an amount sufficient to provide antifreeze protection or in a region of a target tissue to provide antifreeze protein to limit tumour cell or target tissue cryoinjury during cryosurgery. The proteins of the invention may also be used in hypothermic solutions or bathing media to reduce cold damage in order to provide cryogenic or hypothermic preservation of cells and tissues. The proteins may be used as de-icing formulations or used on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    misc_feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC be incorporated into plant, produce or fish in an amount sufficient to CC provide antifreeze protection or in a region of a target tissue to CC provide antifreeze protection to limit tumour cell or target tissue (CC cryoinjury during cryosurgery. The proteins of the invention may also be (CC used in hypothermic solutions or bathing media to reduce cold damage in CC order to provide cryogenic or hypothermic preservation of cells and CC tissues. The proteins may be used as de-icing formulations or used on CC surfaces to reduce existing ice buildup or abate the formation of ice buildup on surfaces such as a road, aircraft, household products, CC machinery and plant surfaces or as a food product to improve the quality cof food by abating freezing of solutions, freezer burn, or degradation CC due to cold storage. The polynucleotides for the activated protein can be used to create transgenic or gene-modified plants, crops, fish, or CC animals having greater tolerance to cold climatisation. The Tm 12.86 can tibody/antiserum which is also used as a screening device to screen CC cold alibraries in an expression system, including cross-species CDNA libraries in an expression system, including cross-species CDNA cold function of the invention. This cDNA was created to facilitate contribution and to true to anhance the activate of the facilitate contribution and to true to anhance the activate of the facilitate contribution and to true to anhance the activate.

                                                                                                                                                                                                                                                                                                                                                                                            Дb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a cDNA polynucleotide comprising a nucleotide congence encoding a thermal hysteresis protein (THP) which is a Type III canti freeze protein derived from the Tenebrionoidea Superfamily. Anti-CC freeze proteins lower the freezing point of a solution without affecting ct the melting point of the solution. An activated anti-freeze protein may composed antifreeze protein to limit tumour cell or target tissue to provide antifreeze protein to limit tumour cell or target tissue to compose the invention or in a region of a target tissue to concern to provide antifreeze protein to limit tumour cell or target tissue to concern to provide cryogenic or bathing media to reduce cold damage in the concern to provide cryogenic or bathing media to reduce cold damage in concern to provide cryogenic or bathing media to reduce cold damage in concern to provide cryogenic or bathing media to reduce cold damage in concern to provide cryogenic or bathing promulations or used on customers. The proteins may be used as de-icing formulations or used on concern to provide cryogenic or hypothermic preservation of cells and concern and plant surfaces or as a food product to improve the quality of food by abating freezing of solutions, freezer burn, or degradation concern to cold storage. The polynucleotides for the activated protein can be used to create transgenic or gene-modified plants, crops, fish, or can animals having greater tolerance to cold climatisation. The Tm 12.86 cantibody/antiserum which is also used as a screening device to screen collar collar concern collar or collar collar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches 111;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

be incorporated into plant, produce or fish in an amount sufficient to provide antifreeze protection or in a region of a target tissue to corporate antifreeze protection or in a region of a target tissue to cryoinjury during cryosurgery. The proteins of the invention may also be used in hypothermic solutions or bathing media to reduce cold damage in corder to provide cryogenic or hypothermic preservation of cells and tissues. The proteins may be used as de-icing formulations or used on tissues. The proteins may be used as de-icing formulations or used on considered to reduce existing ice buildup or abate the formation of ice buildup on surfaces such as a road, aircraft, household products, composed the quality of food by abating freezing of solutions, freezer burn, or degradation conclusion to cold storage. The polynucleotides for the activated protein can be used to create transgenic or gene-modified plants, crops, fish, or antibody/antiserum which is also used as a screening device to screen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cDNA polynucleotide encoding a thermal hysteresis protein which is a Type III anti-freeze protein derived from the Tenebrionoidea Superfamily, useful for providing antifreeze protection to improve the quality of food -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tenebrio molitor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            thermal hysteresis protein; cryosurgery; cold climatisation; ss; hypothermic cell preservation; de-icing formulation; transgenic plant;
cDNA libraries in an expression system, including cross species cDNA libraries to identify homologous sequences in other species. The present sequence represents a cDNA encoding the Tm 7.5 clone/his tag fusion protein minus the signal peptide of the invention. This cDNI was created to facilitate purification and to try to enhance the antifreeze activity of the recombinant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a cDNA polynucleotide comprising a nucleotide sequence encoding a thermal hysteresis protein (THP) which is a Type III anti-freeze protein derived from the Tenebrionoidea Superfamily. Anti-freeze proteins lower the freezing point of a solution without affecting the melting point of the solution. An activated anti-freeze protein may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 4; Page 350; 364pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           P-PSDB; AAU10055.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2002-090137/12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Horwath KL, Myers KL,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                       1129.

RESULT 1 US-09-094-435-3

Sequence 3, Application US/09094435
Patent No. 6251388
GENERAL INFORMATION:

APPLICANT: Donald L Durden

```
REFERENCE/DOCKET NUMBER: 32,327

REFERENCE/DOCKET NUMBER: 234/2

FELECOMMUNICATION INFORMATION:

TELEPHONE: (213) 489-1600

TELEX: 67-3510

INFORMATION FOR SEQ ID NO: 3:

SEQUENCE CHARACTERISTICS:

LEGGH: 1133 base pairs

TYPE: nucleic acid

STRANDEDNESS: single

TOPOLOGY: linear

GENERAL INFORMATION:
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO I
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR APPLICATION UNMBER: US 60/094,190
PRIOR APPLICATION UNMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 5877
                                                                                                                                                                                                                                                Sequence 5877, Application Patent No. 6551795
